Nguyễn Quang Kính

Web Developer Intern

Phone: 0899212670

Email: kinhnguyen.dev@gmail.com

Website: https://kinhnguyen.id.vn/

Address: Hòa Quý, Ngũ Hành Sơn, Đà Nẵng

OBJECTIVE

As a 3rd-year student at Vietnam-Korea University (VKU), I have built a solid foundation in modern web development, RESTful API integration, and database management through intensive academic and personal projects. I am actively seeking an Intern/Fresher opportunity in a professional environment to learn from experienced mentors, bridge the gap between theory and real-world products, and accelerate my development into a professional Software Engineer.

EDUCATION

Oct 2023 - Now

Vietnam - Korea University of Information and Communications Technology, Danang University
Software Engineering
GPA: **3.22**

PROJECTS

Mar 2026 - Jun 2026

ThuBon AquaChain: Edge AI & Blockchain-Based Seafood Traceability Platform
Role: Full-stack Web3 Developer (Team Size: 3)
Description

- **Smart Contract Architecture:** Implementing finite supply chain states and strict role-based access controls for multi-stakeholder verification.
- **Data Provenance & Integrity:** Archived immutable AI cryptographic metadata, IPFS decentralized storage hashes, and physical IoT seal identifiers on-chain to prevent data tampering.
- **Backend Web3 Bridge:** Created FastAPI endpoints leveraging Web3.py to automate secure server-side transaction broadcasting, gas fee estimation, and MongoDB state syncing.
- **Frontend Wallet Management:** Programmed custom Next.js hooks for comprehensive MetaMask wallet handling, event tracking, and automated chain switching configuration.
- **AI-Assisted Development Workflow (Gemini, Claude)**: Leveraged Gemini and Claude to accelerate the development lifecycle, optimizing Solidity code algorithms, conducting smart contract security reviews, and generating robust test scenarios.
- **Core Tech Stack:** EVM (Ethereum Compatible), Solidity, Hardhat, FastAPI, Web3.py, Next.js, Ethers.js v6, IPFS, MongoDB, AI Tools (Gemini/Claude).

Oct 2024 - Dec 2024

VKU Alumni & Mentor Connection Platform
Role: Backend Developer (Team Size: 2)
Description

- **RESTful API Architecture (Java 17+, Spring Boot):** Engineered a robust and scalable backend system by developing comprehensive RESTful endpoints (MentorController, UserController, and AdminController) to facilitate seamless core system interactions.
- **Database Modeling & ORM (MySQL, Spring Data JPA, Hibernate):** Designed and normalized complex relational database schemas. Established strict entity relationships (Users, Roles, MentorInfo, Competitions) using Spring Data JPA and Hibernate to ensure data integrity and optimize query performance.
- **Business Logic & Data Flow Management:** Developed the Service and Repository layers to execute complex business workflows, such as mentor approval algorithms, competition management, and document sharing (CommunicateDocuments).

- **Object (DTO) and Payload design patterns** to decouple internal entities from API responses, significantly enhancing system scalability, security, and maintainability.
- **Comprehensive API Testing (Postman):** Conducted rigorous API testing and debugging utilizing Postman. Validated complex data transmissions, including MultipartFile attachments and DTO validations, systematically resolving logic bottlenecks to ensure a secure and flawless integration with the frontend client.

Core Tech Stack: Java 17+, Spring Boot, Spring Data JPA, MySQL, Postman, Vercel.

May 2026 - Jun 2026

TKApp: Cross-Platform Handmade E-Commerce Application
Role: Mobile/Frontend Developer (Team Size: 2)
Description

- **Architected & Built:** Developed a cross-platform E-commerce app using React Native & Expo. Designed a flexible role-based navigation system and managed global states via Context API to ensure a snappy user experience.
- **Secured Media Uploads:** Integrated Cloudinary for seamless image management. To save backend resources and boost security, I implemented client-side SHA1 signature generation to directly and securely hit the upload API.
- **Powered Real-time Data:** Used Firebase Auth for secure sessions and structured a scalable Firestore database. Heavily utilized onSnapshot to instantly sync inventory, live order tracking, and peer-to-peer Chat across all devices.
- **Engineered Smart Checkout:** Integrated Stripe via a custom Node.js backend. Successfully tackled complex e-commerce logic: automatically splitting multi-vendor cart orders and transparently reconciling seller wallets.
- **AI-Assisted Development & Integration (Gemini API, Claude):** Utilized Claude and Gemini as AI pair-programmers to accelerate UI component building and debug complex asynchronous data flows. Directly integrated the Gemini API into the app to dynamically auto-generate engaging product descriptions for vendors.

Core Tech Stack: React Native, Expo, Firebase (Auth/Firestore), Cloudinary, Stripe API, Node.js/Express, React Context, AI Tools (Gemini/Claude).

Jul 2025 - Aug 2025

"ThichDiCho" – Online Grocery & E-Commerce Web Platform
Role: Frontend Developer (Team Size: 11)
Description

- **Scope of Work:** Took ownership of developing and optimizing key UI modules, specifically handling the Contact Portal, Homepage Product Showcases, and Product Detail Media Galleries.
- **Feature Ownership & UI Architecture (Contact Page):** Spearheaded the end-to-end development of the Contact interface using Next.js, TypeScript, and SCSS Modules. Engineered a responsive, cross-device layout integrating interactive Google Maps iframes and custom SVG icons, ensuring modularity and CSS scoping within a collaborative codebase.
- **Performance Optimization (Homepage Top-Selling Section):** Owned the dynamic data rendering logic for the "Popular & Hot Products" module. Implemented client-side sorting algorithms utilizing the useMemo hook to compute top-selling arrays, successfully preventing unnecessary DOM re-renders and boosting page performance.
- **Component Lifecycle & Bug Resolution (Product Detail Gallery):** Developed a synchronized, dual-carousel image gallery for product details. Deeply manipulated React lifecycles using useRef, useCallback, and asynchronous setTimeout interventions to forcefully resolve critical mobile-specific rendering bottlenecks (e.g., "white screen" bugs upon initialization).
- **Team Collaboration:** Actively participated in a multi-developer environment using Git. Resolved complex UI merge conflicts, refined copywriting across authentication modals (Login/Register), and decoupled complex internal states to maintain architectural consistency across the team's frontend system.

Core Tech Stack: TypeScript, React.js, Next.js (SSR), SCSS Modules, RxJS, React Hooks, Yup, React-Slick, Clsx, RESTful APIs.

SKILLS

BACKEND	• Node.JS • Java
frontend	• ReactJS • HTML • CSS • JS
support tools	• Github • Postman • HeidiSQL

HONORS & AWARDS

September 2024	3rd Prize Best Web Design in Vietnam - Korea University of Information and Communications Technology, Danang University

ACTIVITIES

October 2023 - Now	**VIC - programming club** **Member** is the programming club of Vietnam - Korea University of Information and Communications Technology, Danang University
